Thornberry Hip Positioner

Designed by Robert L. Thornberry, MD

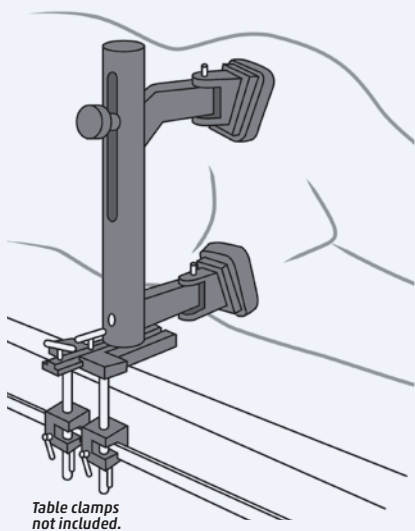

Designed to be adjustable yet sturdy, and is especially helpful when stabilizing a large patient during total hip and revision surgery

The Thornberry Hip Positioner is designed to attach directly to the operating table utilizing existing table clamps, or the Innomed #2595 Table Clamps, which are not included.

The upper arm assembly can be adjusted for height. Both arms include a push-button to allow the pad platform to swivel and lock into any of three fixed positions. The tall 18" post also includes a push-button to allow the post/arms unit to swivel and lock into any of three fixed positions.

The complete unit is autoclavable except for the foam pads. The pads are made of semi-dense foam to help prevent pressure points and are sealed with a washable coating. The coating also helps to lessen the possibility of skin breakdown.

It may be necessary to place the Double Table Attachment(s) 180°—sticking out from the table—to accommodate the large patient, as shown at left.

Optional Items:	
2595	[Table Clamp] One only with this number

Positioner consists of:

Front Support Unit

One 18" post assembly with a lower arm and swiveling pad platform, one upper arm assembly with a swiveling pad platform, one post knob, two pads, and one double table attachment.

Back Support Unit

One 7" post assembly, one post knob, one pad plate, one pad, one slider, and one double table attachment.

Wixson Hip Positioner

Designed by R.L. Wixson, MD

Provides stable positioning of a patient during hip surgery

The Wixson Hip Positioner is used for stable positioning of a patient during total hip and revision surgery. It is designed to be placed on top of the operating table.

The base plate is rubber-backed to reduce slipping on the table. The uprights can easily be slid in and out of the multiple slots in the plate for desired positioning and locked into position with the locking bolt. The complete upright assembly is radiolucent.

The upright pads and the base plate pad are made of semi-dense foam to help prevent pressure points and are sealed with a washable coating. The coating also helps to lessen the possibility of skin breakdown.

The hip positioner consists of: One 10" post with double pads, one 6" post with a single pad, one 20" base plate, one base plate pad, two 2" spacers, one 4" knob, and one 6" knob.

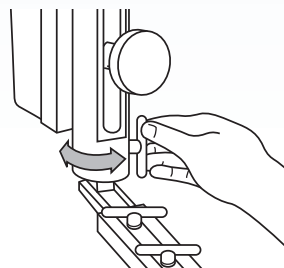

The spacers and longer knobs are supplied for use with larger patients: use one spacer with the 4" knob, or combine the two spacers to use with the 6" knob.

The pad assembly can be adjusted for additional height and width. The upright posts are modular. The complete unit is radiolucent and autoclavable except for the foam pads.

The upright assembly can be rotated and locked in place.

The upright assembly adjusts by a sliding track to accommodate various sized patients. It is locked in the sliding track by tightening one or two locking bolts.

The pads can be adjusted for height and width.

Stulberg Hip Positioner

Designed by S. David Stulberg, MD

Provides stable positioning of a patient during hip surgery

The Stulberg Hip Positioner is used for stable positioning of a patient during total hip and revision surgery. It is designed to attach directly to the operating table utilizing the existing table adapters.

The upright pads are made of semi-dense foam to help prevent pressure points and are sealed with a washable coating. The coating also helps to lessen the possibility of skin breakdown.

The hip positioner consists of: One 10" post assembly with double pads and one 6" post assembly with a single pad, two 2" spacers, one 4" knob, one 6" knob, and two table attachments.

The spacers and longer knobs are supplied for use with larger patients: use one spacer with the 4" knob, or combine the two spacers to use with the 6" knob.

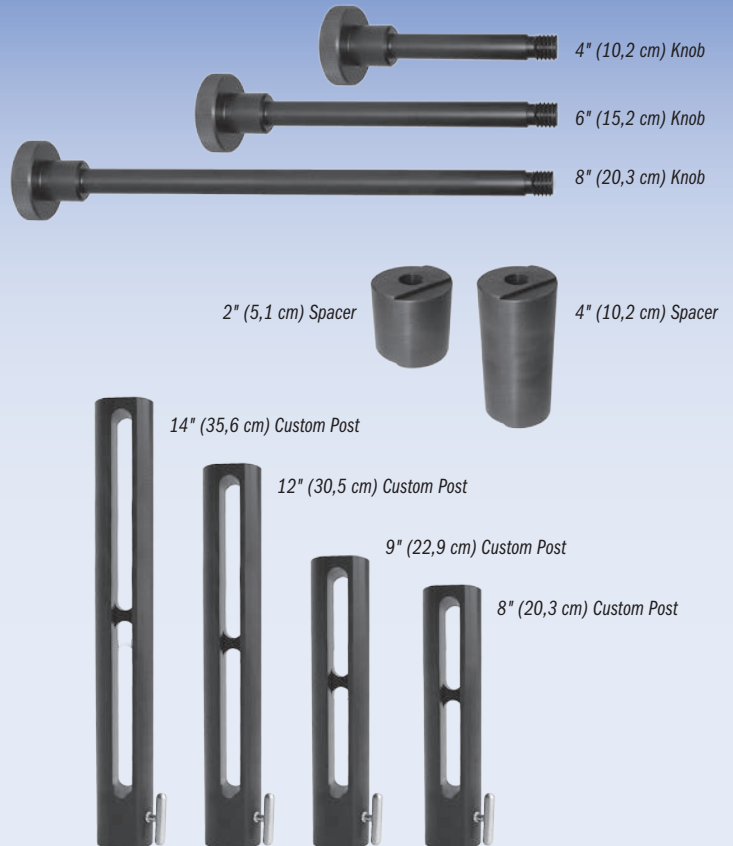

The pad assembly can be adjusted for additional height and width. The upright posts are modular. The complete unit is radiolucent and autoclavable except for the foam pads and the storage case.

Cherf Leg Holder

Designed by John Cherf, MD

Supports the lower extremity for prepping before hip or knee surgery

Useful for all lower extremity procedures and is particularly helpful for supporting the leg with the patient positioned in the lateral position. By holding the foot/ankle in an externally rotated position, the knee can be locked into extension which helps eliminate the need for manual support.

The leg holder may also be used to support the limb for surgical patients in the supine position such as for knee and foot/ankle procedures.

Jackson Flat Top Traction Device

A table-top traction device designed for fracture fixation in the acetabulum, pelvis, and femur

Can be used in a variety of applications, including open and percutaneous pelvic and acetabular fracture surgery, hip fracture fixation and femur fracture fixation including antegrade or retrograde nailing.

The light-weight portable device attaches directly to a standard radiolucent flat top table. Recommended for use with the disposable sterile kit, one of which is included, with additional kits sold separately.

PRODUCT NO'S:

Wixson Anterior Suspension Hook System

Designed by Richard L. Wixson, MD

Designed for use with a standard operating room table, helps to facilitate elevation of the proximal femur during direct anterior approach THR

Used for femoral preparation after the acetabular component has been implanted

The system consists of:

- 1) A **rotating clamp** that can be attached to the operating table side rails over the drapes.
- 2) A **vertical bar** that fits into the clamp and comes above the side of the table.
- 3) A **horizontal attachment** that fits over the vertical bar and can swing over the wound.
- 4) A threaded **tightening rod** that inserts through a slot in the arm of the horizontal attachment and can be used to bring up the proximal femur.
- 5) A large **offset femoral hook** that can be placed above the lesser trochanter and around the posterior femoral neck and trochanter base. The handle of the hook has a chain to attach to the threaded tightening rod coming through the horizontal arm.

Jeffers Hip Retractor

Designed by Andrew Jeffers, MD

For use during the anterior approach, this retractor is designed to help protect the TFL from laceration during acetabular preparation in addition to maximizing exposure

Used with or without a weight, it is placed over the TFL and vastus lateralis and under the femur. The broad surface helps then gently retract the TFL and vastus away from the reamer path.

PRODUCT NO:
6384
Overall Length: 9.5" (24,1 cm)
Depth: 6.5" (16,5 cm)
Blade Width at Top: 1.8" (4,6 cm)
Blade Width at Bottom: .8" (2 cm)

Sinha Retractor for Acetabular Reaming

Design modification by Ajoy K. Sinha, MD

Designed to retract and protect the femur while preparing the acetabulum for reaming during antero-lateral approach total hip surgery

After the femur is prepared and the broach has been placed, the Sinha retractor is placed on the infero-lateral aspect of the acetabulum with the neck of the broach projecting through the large hole in the retractor blade. This serves to displace the femur posteriorly and to help protect the greater trochanter while acetabular reaming is conducted.

Femoral Head and Acetabular Exposure

Unger Wide Hohmann
Placed around the femoral neck to expose the anterior hip capsule.

Unger Narrow Hohmann
A curved sharp hohmann retractor placed under the posterior acetabulum to depress the femur and expose the acetabulum.

Unger Blunt Narrow Cobra
A ventral cobra retractor placed over the anterior acetabulum wall to pull the Rectus Femoris anteriorly.

Femoral Neck Exposure

Unger Wide Hohmann
Placed medial to the femoral neck to push the femur laterally, helping to expose the femur for implant broaching and insertion.

Unger Femoral Neck Elevator
A femur elevator designed to interact with the Unger Anterior Fulcrum to expose the femur. Placed behind the Greater Trochanter.

Unger Soft Tissue Proetctor
A unique device that protects the Tensor Fascia Lata and allows the femoral elevator to lever/push up the femur for femoral component broaching and placement.

O'Reilly Dual Handle Direct Anterior Retractor

Designed by Michael P. O'Reilly, MD

Can be used in MIS/Direct Anterior, Total Hip Arthroplasty, Posterior/Anterolateral THA, and Hemiarthroplasty.

Designed for use over the anterior pelvic rim during acetabular exposure in direct anterior THA, the dual handle design allows for use in both right and left hips, as well as easy exchange of the instrument between assistants

PRODUCT NO:
3011
Overall Length: 13.25" (33,7 cm)
Blade Depth: 4.25" (10,8 cm)

Bozeman Anterior THA Femoral Elevator

Designed by Daniel M. Gannon, MD

Designed to elevate the femur anteriorly, providing exposure to allow broaching of the femoral canal and final placement of the femoral component, during direct anterior approach THA

PRODUCT NO'S:

6144 [Small]
Overall Length: 11.5" (29,2 cm)
Blade Neck Width: 26,1 mm
Blade Flared End Width: 30,1 mm
6146 [Medium]
Overall Length: 13.5" (34,3cm)
Blade Neck Width: 29,8 mm
Blade Flared End Width: 34,7 mm
6145 [Large]
Overall Length: 15.5" (39,4 cm)
Blade Neck Width: 33,6 mm
Blade Flared End Width: 39,3 mm

Helps to retract the TFL muscle out of the way, and provides surface area for the fulcrum effect, helping to reduce pressure on the muscle. Narrow designs helpful in minimally invasive surgery. The flared end joins the prongs to help maintain soft tissue retraction away from the broach teeth, while the two prong design helps placement lateral to the tip of the greater trochanter and elevates the femur.

Left/Right Flared Cobra Retractors

Designed by Henry Boucher, MD
 Single prong design modification by Walter Frueh, MD

Left and right retractors can be used with the direct anterior approach for exposure of the acetabulum

PRODUCT NO'S:

6110-01 [Double Prong – Right]
Overall Length: 15" (38 cm)
6110-02 [Double Prong – Left]
Overall Length: 15" (38 cm)
6109-L [Single Prong – Left]
Overall Length: 15" (38 cm)
6109-R [Single Prong – Right]
Overall Length: 15" (38 cm)

ANTERIOR APPROACH: Placed inferior to the trans-acetabular ligament during exposure and preparation of the acetabular component. The curve and "twist" of the retractor allow for gentle retraction of the medial and inferior soft tissues and skin. Helps provide easier retraction for the assistant on the other side of the operating table.

See page 39 for posterior approach positioning

Wertz Anterior THA Femoral Elevator

Designed by Michael P. Wertz, MD

Helps deliver the femur out of the incision during anterior total hip arthroplasty

Inserted into the femoral canal for elevation, the knurled underside helps to reduce the chance of slippage.

PRODUCT NO:
6148
Overall Length: 12.625" (32,1 cm)
Blade Length: 3" (7,6 cm)

◀ Knurled to help reduce the chance of slippage

Sarraff Coated Hip Dislocation Hook

Designed by Khaled M. Sarraf, MD

Designed to aid in dislocating a femoral stem while helping to prevent damage to the trunion

- ▶ Coated hook end helps to prevent from marring component surfaces.
- ▶ Can also be used as a bone hook, and for femoral elevation.

PRODUCT NO:
5905
Overall Length: 12.5" (31,8 cm)

Rockowitz T-Handle Femoral Canal Finder Rasp

Designed by Neal L. Rockowitz, MD

Designed to sound the femoral canal prior to stem broaching, especially useful to help start the broach path during the direct anterior approach

PRODUCT NO:

Durham Offset Zelpi Retractor

Designed by Alfred Durham, MD

Staggered depth retractor designed for exposure during total hip and total shoulder surgery

- ▶ In hip surgery, with the handle towards the surgeon, the longer leg is on the inside.
- ▶ In shoulder surgery, with the handle downward, the longer leg is on the outside.
- ▶ The longer leg extends 1.1" (2,8 cm) deeper.

PRODUCT NO'S:

Romanelli Deep Gelpi Retractor

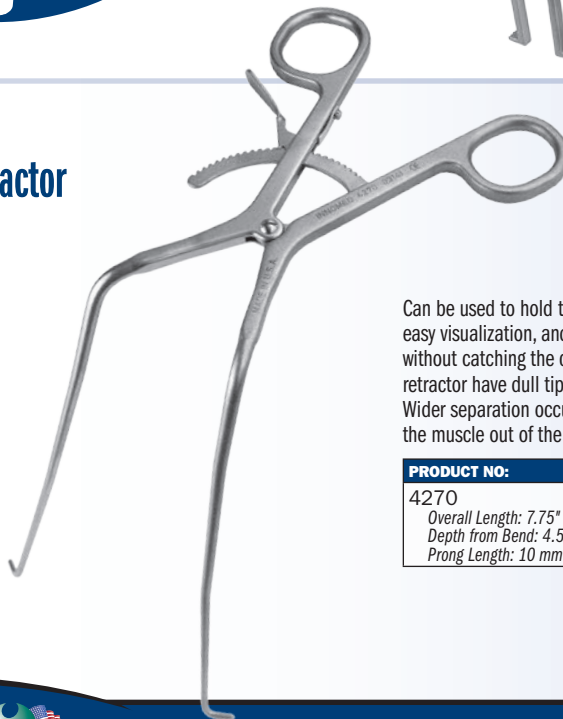

Designed by Ron Romanelli, MD

Offers the versatility and ability to be used in minimally invasive total hip replacements

Can be used to hold the hip capsule out of the way for easy visualization, and to allow reaming of the acetabulum without catching the capsule in the reamer. The ends of the retractor have dull tips to help avoid soft tissue damage. Wider separation occurs at the deep capsule level. Holds the muscle out of the way while retracting the capsule.

Tube and Extender Pins

Designed to help achieve wide exposure of the acetabulum during total hip arthroplasty

Tube pins with depth stops are inserted under direct visualization into the thick bone of the posterior column and iliac wing. Extender pins placed in the tube pins help keep the soft tissues from obstructing the view of the acetabulum. The low profile of the tube pins helps keep them out of the way of the surgeon. The extender pin can be removed or left in the tube pin depending on the size of the patient.

Goytia Stackable Hohmann Retractors

Designed by Robin N. Goytia, MD

Interlocking design helps to increase depth and leverage in hip exposure, particularly of the anterior acetabulum—especially useful with large patients

- ▶ Custom fitted holes for interlocking retractors helps provide stability
- ▶ When “stacked”, the increased lever arm of the retractor helps reduce fatigue
- ▶ Ideal for use with large patients where extra depth, leverage and force is needed

Wetzel Modified Hohmann Retractor

Designed by Robert Wetzel, MD and Todd McKinley, MD

The long point is designed to be placed around, on, or through a bony structure and then levered back to retract tissue

The handle is contoured to allow better leverage and visualization. Can be held in place with weights or by hand.

PRODUCT NO:
4539
Overall Length: 10" (25,4 cm)
Blade Width: .85" (21,5 mm)

Lombardi Femoral/Gluteus Medius Minimus Retractor

Designed by Adolph V. Lombardi Jr., MD

Designed for acetabular exposure, and to retract the gluteus medius minimus during femoral reaming

For acetabular exposure, the retractor can be placed easily at the level of the ischium and driven into the ischium to retract the femur posteriorly when using an anterolateral approach to the hip. Also using an anterolateral approach or a modified Harding hip approach, the retractor can be placed in the tip of the greater trochanter and can effectively retract the abductor mechanism, namely the gluteus medius minimus so that reaming of the femur can be performed.

Offset Handle Hip Retractor

Designed by Gina Bart, PAC

The 90° offset handle helps move the assistant's hand out of the way, allowing better access to the surgical site

During posterior THR, the instrument allows for one assistant to hold the leg while retracting the abductors, thereby maximizing both a clearer view and better physical access to the surgical site.

Harwin Modified Cobra Retractor

Designed by Steven F. Harwin, MD, FACS

Designed for use during total hip and knee surgery

The long handle and obtuse angle provide ergonomic leverage—especially helpful for use with obese patients.

In total hip surgery, the wide, concave blade design allows for enhanced exposure—especially useful in anterior hip surgery with the placement of reamers, and to elevate and expose the proximal femur.

In total knee surgery, the wide blade of the large retractor spans the prepared box and helps bring the tibia forward. The small retractor helps with retraction of the medial and lateral structures, where the wide, concave blade provides added exposure over standard bent Hohmann retractors. The serrated tip helps improve stability.

Standard Frame

PRODUCT NO'S:
7450-01A [Standard] 12.75" x 9.5" (32,4 cm x 24,1 cm)
7450-01B [Medium] 9.75" x 9.5" (32,4 cm x 24,1 cm)

Double Locking Standard Frame

Designed by Matthew P. Lorei, MD

PRODUCT NO'S:
7430 [Standard] 12.75" x 9.5" (32,4 cm x 24,1 cm)

Designed with a second sliding blade lock for enhanced stability, especially in obese patients

Allows both locked blades to be fully adjustable, yet with the ability to be securely fixed, diminishing the chance for shifting, and allowing for more secure self-retaining exposure.

Helps to free assisting personnel while providing excellent exposure during hip arthroplasty and hip fracture surgery

Charnley/Sorrells Low-Profile Hip Arthroplasty Retractor System

Designed by R. Barry Sorrells, MD

Conforms to the thigh, providing low-profile self-retaining exposure of the femur and acetabulum in Total Hip Arthroplasty

- ▶ Provides a varied selection of blades, both pre-shaped and malleable, for both superficial and deep retraction
- ▶ Curved blades conform with the thigh
- ▶ Self-retaining and easily adjustable

COMPLETE SYSTEM INCLUDES:

- (1) Low-Profile Frame
- (2) Small Retractors – (1) Narrow, (1) Wide
- (3) Medium Retractors – (1) Narrow, (1) Wide, (1) Malleable Narrow
- (2) Large Retractors – (1) Narrow, (1) Wide

Left/Right Flared Cobra Retractors

Designed by Henry Boucher, MD
Single prong design modification by Walter Frueh, MD

Left and right retractors can be used with the anterior, posterior or lateral approach to help expose the acetabulum in total hip surgery

PRODUCT NO'S:	
6110-01 [Double Prong – Right]	Overall Length: 15" (38 cm)
6110-02 [Double Prong – Left]	Overall Length: 15" (38 cm)
6109-L [Single Prong – Left]	Overall Length: 15" (38 cm)
6109-R [Single Prong – Right]	Overall Length: 15" (38 cm)

POSTERIOR APPROACH: Placed over the anterior acetabular wall for supero-anterior translation of the femoral head and neck during acetabular preparation. The prong(s) pierce the capsule over the anterior wall, then the curve and "twist" of the retractor allows for gentle retraction on the femoral neck.

ANTERIOR APPROACH: Placed inferior to the trans-acetabular ligament during exposure and preparation of the acetabular component. The curve and "twist" of the retractor allow for gentle retraction of the medial and inferior soft tissues and skin. Helps provide easier retraction for the assistant on the other side of the operating table.

Femoral Elevator with Trough

Designed by Henry Boucher, MD

Helps to elevate the femur and provide a trough for bone to collect in during shaping of the femoral head

PRODUCT NO:	
6030	
Overall Length: 17" (43,2 cm)	
Handle Length: 8" (20,3 cm)	
Prong Length: 1" (25 mm)	
Prong Width: 9 mm 18 mm Gap 9 mm	
Trough At Narrowest: 2" (51 mm)	
Trough At Widest: 3.5" (89 mm)	

Designed for femoral head preparation, the elevator is placed against the anterior femoral neck when the femur is flexed and internally rotated. Helps to elevate the femoral head for milling, and the "trough" provides a channel for the instruments and allows for easy clearance of reamings. Skin, abductor, subcutaneous fat and capsule are protected and retracted with the trough.

Dorr Hip Instruments

Designed by Lawrence D. Dorr, MD

Dorr Curved Hohmann Acetabular Retractor

Placed over the top of the piriformis, helps retract the gluteus medius.

Dorr Narrow Bent Acetabular Retractors

Retracts the gluteus maximus off the trochanter and exposes the back of the greater trochanter. The long version is used with larger patients.

Dorr Bent Hohmann Acetabular Retractor

Placed between the capsule and outer external oblique muscle to protect medial circumflex vessels. The tip engages the condyloid notch bone (teardrop). Helps retract soft tissues during acetabular exposure.

PRODUCT NO'S:

D6105 [Dorr Curved Hohmann Acetabular]

Blade Width: 18,5 mm
 1 Overall Length: 14" (35,6 cm)
 Depth from Handle: 4.5" (11,4 cm)

Dorr Curved Blade Bent Hohmann Retractors

Used for both femoral exposure—placed around the femoral neck or beneath the top of the femoral head—and acetabular exposure—posterior superior of the acetabulum.

Upward Double Bent Hohmann Retractor

Tapped into the ilium to help retract the femur for acetabular exposure.

PRODUCT NO'S:

D6106 [Dorr Curved Blade Bent Hohmann]

5 Overall Length: 13.5" (34,3 cm)
 Depth from Handle: 4.5" (11,4 cm)
 Blade Width: 40 mm

Minimal Incision Total Hip Retractors

Designed By Wayne M. Goldstein, MD

Instruments designed for Minimal Incision Total Hip Surgery using the standard posterior lateral approach

Used in conjunction with a Charnley-type frame and blade system (SEE PAGE 32-33).

Posterior-Inferior Retractors

The posterior-inferior retractor is placed with the point at 6 o'clock and the retractor's axilla resting on the ischium. The remaining blade of this retractor is used to retract the remaining capsule from the posterior lip of the acetabulum.

PRODUCT NO'S:

Moran Posterior-Inferior Retractor

Designed by Michael C. Moran, MD

Designed to achieve a stable position on the pelvis and expose the posterior-inferior aspect of the acetabulum

The short sharp tip is placed into the ischial sulcus behind the posterior acetabular rim. The long dull tip comes to rest behind the teardrop, while the retractor handle projects in a posterior-inferior direction.
